DETAILED ACTION

Election/Restrictions

Upon reading and study of the application, especially the latest Amendment, the claimed inventions have been discovered to be of multiple inventions.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, 8-9, 11-13, 18-102, drawn to security handling within FPGA, classified in class 713, subclass 189.
- II. Claims 103-111, drawn to bitstream format, classified in class 380, subclass 255.

Inventions are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, each subcombination has separate utility as noted by applicant – such as in the Remarks section (of the Amendment) which has emphasized the importance of handling within FPGA. See MPEP § 806.05(d).

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
